

# Gain Financial Clarity with Greenshades Payroll's Custom Fields for Cost and Project Accounting

Labor costs are a significant expense for any business and tracking them accurately is essential for project accounting and cost accounting. However, manually calculating the hours an employee has spent on each job or working for a client can be time-consuming and increase the risk of errors. Without accurate labor cost data, businesses may make uninformed decisions that could harm their operations and bottom line.

## Custom Fields

Greenshades custom fields allows you to cut out the risk associated with manual labor by breaking-out labor expenses into more granular details for your accounting needs. During the payroll process, you can easily tie earnings to a location, project, client, and more to help you accurately track the true cost of the labor associated with a specific project or product.

Through a simple process, you can set up the custom fields in Greenshades Payroll and easily apply them during the payrun process.

To create custom fields, go to your settings and follow the steps provided. If you use GL dimensions, apply them to your custom fields.

The new fields you created will populate into your payroll workflow, so you can easily apply custom fields where you see fit.

The mapped earning will appear in the GL for your reporting needs.

## Greenshades Payroll

Greenshades Payroll supports project and cost accounting with custom fields. By creating and assigning custom values to fields such as departments, programs, and services, organizations can gain valuable insights into labor expenses and optimize financial resources. With Greenshades' custom fields, you can take your cost reporting and project accounting to the next level. And that's not all - expand your capabilities beyond payroll with Greenshades' HR, tax, and compliance software, streamlining your employee operations and driving growth and success.
